SAND-DRESSED TURF

Poligras SuperPlay

A NEW, MULTIPURPOSE TURF WITH FIH CERTIFICATION

The new partially filled Poligras SuperPlay brings versatility into play: its certification for official FIH National competitions makes it a true hockey pro. Meanwhile, Poligras SuperPlay is a versatile multi-sport turf that is suited for various types of sport, thanks to its soft touch and high resistance.

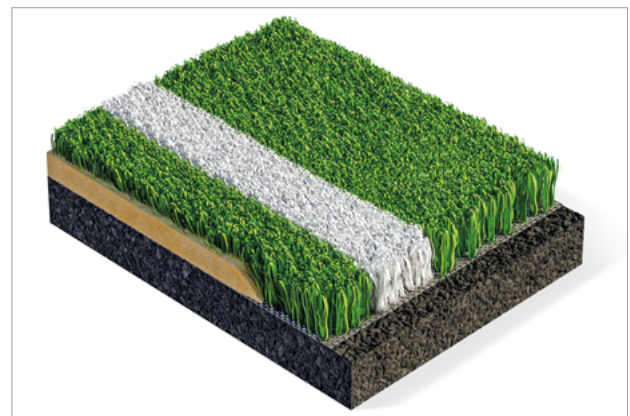

PROPERTIES

- Soft surface, despite extremely robust fibres
- Attractive look, thanks to BiColour colour scheme
- Permanent crimping
- High filament density

HOCKEY, TENNIS, MULTISPORT

The filaments, developed specially for Poligras SuperPlay, offer vital performance characteristics that make all the difference when it comes to sand-dressed hockey pitches: thanks to their 100 % PE composition, they are both super soft and extremely durable. The soft surface is pleasant to the touch and reduces the risk of injury. The high filament density provides a realistic feel, rivalling that of an unfilled pitch. Another special feature is the BiColour colour scheme: filaments in two different shades of green give Poligras SuperPlay an attractive, natural look. Meanwhile, Polytan's PreciTex technology ensures a uniform texture and coverage. On hot days, Polytan's CoolPlus function keeps the pitch comfortably cool: pigments ingrained in the surface of the fibres reflect infrared head to reduce the surface temperature.

AREAS OF USE

- Clubs and training facilities
- School and multisport facilities

PRODUCT SPECIFICATIONS

- Eight monofilaments with approx. 185 µm fibre thickness
- Exclusive Polytan CoolPlus function
- Exclusive Polytan PreciTex texturing
- Exclusive PolyCoat PU coating with TuftGuard function
- BiColour colour scheme

Sand-filled
